PROFILE

Full stack developer with **4 years** building business software that runs in production: CRMs, ERPs and intranets for retail, distribution and service companies. I work remotely for **Smart Tech Software (Delaware, USA)**, where I am the **lead developer of a Laravel 12 CRM** — 384 of the repository's 452 commits— and contribute across all three layers of a multi-tenant ERP: Laravel web app, Go API and offline-first Flutter app. My strength is carrying a requirement from the data model all the way to the interface, including the third-party integrations nobody wants to touch.

WHAT SETS ME APART

- **Integrations with systems I do not control.** Siigo, Siesa, ICG, Airtable, QuickBooks, Mercado Libre, Zona Pagos (PSE · BBVA) and MikroTik devices via remote commands: poorly documented APIs and data that has to be reconciled between systems that do not talk to each other.
- **Offline-first synchronization on three fronts.** An offline PWA queue, a local Drift/SQLite database in Flutter and an incremental-changes endpoint in Go: solved on the web, mobile and server sides of the same product.
- **Bilingual by design.** Everything I ship exists in Spanish and English from the first commit, through the project's i18n system.

PROFESSIONAL EXPERIENCE

Full Stack Developer · Smart Tech Software, LLC

Feb 2026 — Present
Service contract · Remote (USA)

Building business and e-commerce platforms across four products in parallel: an operational CRM, a route-sales ERP, the company's project manager and its corporate site.

- **Fayette CRM (Laravel 12):** lead developer. Leads, clients, projects, tasks, installers, shipments and a stage-based production board, over 30 domain tables and 70 migrations.
- **Real time and offline:** live tasks and notifications with Laravel Reverb and Echo, plus an offline PWA queue that lets users create tasks with no signal and upload them once back online.
- **Data migration:** reversible import from Airtable and QuickBooks with parsing, preview review and a sync panel, preserving the timeline that already existed in the system.
- **SelBuk AI (multi-tenant ERP):** Routes and Visits modules with an interactive Leaflet + OpenStreetMap map, AI Reorder, multi-order Returns, Reports, Payments received and the RBAC permission matrix.
- **Go API and Flutter app:** REST endpoints, SQL migrations and incremental sync for those modules, plus their offline-first mobile version with Drift/SQLite, infinite scroll and RBAC applied to the menu.
- **flixwai.com and its project manager:** full corporate site with no framework (custom PHP, CSS and JS, PHPMailer, SEO) and an internal Laravel 12 tool with versions, visual approvals and prototypes.
- **Delivery:** automated deployments with GitHub Actions to development and production, with the OS scheduler and per-environment variables.

384/452 commits on Fayette CRM | **187** commits across SelBuk AI's 3 repos | **4** products in parallel

STACK · Laravel 12, PHP 8.2, Go, Flutter, Alpine.js, jQuery, Tailwind CSS, Laravel Reverb, MySQL, PostgreSQL, Vite, GitHub Actions

Full Stack Developer · naw!

Sep 2025 — Jan 2026
Project contract · Remote

Sales and installation-order management app for home services, covering the flow from the commercial request to technical execution in the field.

- **Network hardware:** direct interaction with MikroTik devices through remote command execution to configure network parameters, activations and operational settings for contracted services.
- **Automated invoicing:** Siigo API integration for client creation, invoice issuing and cash receipts, keeping accounting consistent between the commercial and administrative systems.
- **Payments:** Zona Pagos (BBVA) integration to process PSE transactions inside the commercial flow.

STACK · PHP, JavaScript, MikroTik API, Siigo API, Zona Pagos (PSE), MySQL

Frontend Developer (with backend support) · PsicoAlianza

Jan 2025 — Jan 2026
Full-time · Hybrid

ATS for recruitment: psychometric tests, job postings, candidate evaluation and requests.

- Dynamic interfaces and interactive components with state handling, validation, events and asynchronous communication with the backend.
- Creation and tuning of endpoints, transactional logic and data normalization across modules to keep the recruitment flow consistent.

STACK · Laravel, PHP, JavaScript, CSS, MySQL, Scrum

Web Developer · Waplicaciones S.A.S.

Mar 2024 — Jan 2025
Full-time · Hybrid

Development on Symfony and Drupal with JavaScript, AJAX and REST API consumption and creation, on internal-process applications for several clients.

- **Interdrogas:** led the purchase-request system integrated with Siesa through synchronized API services, improving supply-chain efficiency.
- **Coopicrédito:** interactive room-booking calendar with availability validation and automated handling of credit requests.
- **Impresistem:** partner-selection application, integrating modules and interface validation.

STACK · Symfony, Drupal, PHP, JavaScript, AJAX, REST API, Siesa, MySQL

Full Stack Developer · BismmaSoft

Sep 2023 — Oct 2023
Project contract · Remote

Asset appraisal and business valuation platform with subscriptions.

- Backend architecture for users, roles, persistence and transactional operations, with data integrity and traceability.
- Mercado Libre payment gateway over REST APIs, with status validation, callbacks and a historical transaction log.

STACK · PHP, JavaScript, AJAX, Mercado Libre API, MySQL, Bootstrap

Web Programmer · Inversiones Azulado S.A.S.

Aug 2022 — Oct 2023
Full-time · Hybrid

Custom intranets for supermarkets and small retailers, taking part in the whole cycle: requirements, analysis, implementation and deployment.

- **ICG interoperability** to synchronize inventory, sales and product control in real time between the client's platforms and their existing software.
- Dynamic admin panels with WordPress, JavaScript and jQuery, plus the landing page for the "Modo Avión" flight-simulator project.

STACK · PHP, WordPress, JavaScript, jQuery, Bootstrap, CSS, MySQL, ICG

EARLIER SUPPORT & IT EXPERIENCE

Teleperformance — technical support, Vodafone Spain campaign (2022). **Disproel S.A.** — support during the 2022 congressional election count. **Telefónica (Movistar)** — SENA apprentice (2021): automated the bulk data load through Excel files.

TECHNICAL SKILLS

DAILY USE	**Backend:** PHP 8 · Laravel 12 · REST APIs · MySQL/MariaDB · Eloquent ORM **Frontend:** JavaScript (ES6+) · HTML5 · CSS3/Sass · Blade · Alpine.js · jQuery · Tailwind CSS · Vite · responsive design · i18n **Tooling:** Git and GitHub · Scrum
SHIPPED WITH	**Backend:** Symfony · Go · multi-tenant and RBAC · WebSockets (Reverb/Echo) · queues, jobs and cron · PostgreSQL · SQLite · SQL Server **Frontend and mobile:** React · TypeScript · Bootstrap · PWA and offline mode · Leaflet/OpenStreetMap · Flutter/Dart · Drift/SQLite · ML Kit (on-device OCR) **Integrations:** Siigo · Siesa · ICG · Airtable · Mercado Libre · Zona Pagos (PSE) · MikroTik · PhpSpreadsheet **Delivery:** GitHub Actions (CI/CD) · Linux and deployments · WordPress · Drupal · Kanban
WORKING KNOWLEDGE	Angular · Ionic + Capacitor · Riverpod · Firebase · Docker

EDUCATION

Software Engineering (in progress)
Corp. Universitaria Iberoamericana · Oct 2021 — Present

Technologist in Information Systems Analysis (ADSI)
SENA · Jan 2020 — Jul 2021

Software Programming Technician
SENA · with the IBM P-TECH program · 2018 — 2019

CERTIFICATIONS
